Full-Stack Software Engineer | Product Engineering
Next.js | TypeScript | Supabase/PostgreSQL | REST APIs | Testing & CI/CD

SUMMARY

Full-stack software engineer with 2+ years of hands-on experience building SaaS, ecommerce, delivery-operations, and data/reporting products. I own features end to end - requirements, data modeling, APIs, authentication and RLS, payments, UI, testing, deployment, and production debugging. My regulated laboratory background adds strong QA, traceability, documentation, and data-integrity discipline.

CORE SOFTWARE SKILLS

Frontend & Application	Next.js, React, TypeScript, JavaScript, responsive UI, component architecture, dashboards, forms, filtering
Backend, Data & Auth	Supabase/PostgreSQL, MongoDB, SQL, REST/JSON APIs, server actions/routes, schemas/migrations, RLS, tenant isolation, auth/roles
Quality & Delivery	Playwright, Vitest, Zod, Sentry, TypeScript checks, GitHub, Vercel CI/CD, regression testing, root-cause analysis
AI & Developer Tooling	Anthropic/OpenAI APIs, Claude Code (proficient), OpenAI Codex, prompt guardrails, AI-assisted review, Google/Mapbox APIs

PROJECT PORTFOLIO

Korent - Multi-Tenant Event Rental SaaS | korent.app

- Built and hardened a multi-tenant rental platform spanning storefront checkout, inventory and availability, deposits/payments, customer and order workflows, PDF documents, delivery routing, and role-based dashboards.
- Found and fixed a cross-tenant catalog isolation defect and a Stripe webhook race condition during pre-beta hardening, then validated affected workflows with automated and manual regression testing.

Couranr Market - Ecommerce & Local Delivery Platform | couranrmarket.com

- Built shopper, storefront, admin, delivery, and API surfaces for a direct-to-consumer commerce/local-delivery system, including checkout/payment flows, address and routing integrations, and automated test gates.
- Designed auth/RLS, pricing controls, and AI-assisted shopping workflows while keeping money, inventory, tax, delivery eligibility, and order-finalization decisions in deterministic server logic.

Couranr OS - Delivery Operations Platform | couranr.com

- Built multi-role delivery workflows covering request intake, immutable quote versions, payment obligations, service plans, dispatch, driver execution, tracking/proof, returns/refunds, and operations review.
- Implemented role-scoped data access, Supabase RLS, server-authoritative pricing, idempotency controls, migration safety, and release/test gates.

PROJECT PORTFOLIO - CONTINUED

TankSight - Inspection Reporting & Client Portal Prototype | Public GitHub Project

- Built a role-scoped client/inspector portal that converts processed PAUT-style measurements into heatmaps, region summaries, historical trends, paginated APIs/data exploration, and downloadable PDF reports.
- Implemented MongoDB aggregation and a layered domain/service/repository architecture with 22 Vitest domain tests.

PROFESSIONAL EXPERIENCE

Independent Full-Stack Software Engineer / Product Developer | CrecyStudio | 2024 - Present

- Build and operate full-stack products with Next.js, TypeScript, Supabase/PostgreSQL, Stripe, APIs, and Vercel; own work from product requirements and schema design through implementation, security review, testing, deployment, and production debugging.
- Translate business problems into scoped releases, data models, auth/permission rules, acceptance criteria, and production-ready workflows. Use Claude Code and OpenAI Codex as development tools while personally reviewing diffs, behavior, and release risk.

Laboratory Technician - HPLC / UV-Vis Specialist | Elutia | Gaithersburg, MD | Nov 2025 - 2026

- Worked in regulated medical-device R&D requiring SOP compliance, traceable ELN records, controlled documentation, repeatable testing, analytical troubleshooting, and data integrity.

QC Analytical Lab Technician II | Vandstrom | Gaithersburg, MD | Jul 2022 - Nov 2025

- Performed HPLC-based analytical testing under SOPs and processed results for reporting, trending, troubleshooting, and team review in a quality-focused environment.

Laboratory Technician I | Thermo Fisher Scientific | Germantown, MD | Feb 2020 - Jul 2022

- Handled, tracked, inventoried, and prepared specimens across controlled storage conditions while following SOPs, safety requirements, and sample-tracking/documentation workflows.

EDUCATION & CERTIFICATIONS

Bachelor of Science, Biology - University of Maryland

Associate's Degree, General Studies - Baltimore City Community College

CompTIA A+ Training - Completed | Bilingual: French & English
